

Beamer Code Theme

A Minimalistic Theme For Beamer

Anno Knierim

July 1, 2025

Note

About this theme:

- To install this theme, at least `beamerthemecode.sty` has to be moved to a directory that is searchable by \LaTeX . This can be one of
 - `TEXMFHOME/tex/latex/beamerthemecode`. `TEXMFHOME` can be accessed via `kpsewhich --var-value TEXMFHOME`; usually this returns `$HOME/texmf`.
 - The same directory you compile your document in.
 - Any directory which is included in `TEXINPUTS`.

You can install the theme with the following command:

```
$ cd `kpsewhich --var-value TEXMFHOME` && git clone https://github.com/aknierim/beamerthemecode
```

Split Frame

This theme allows you to create visually split slides.

- Use the `\splitframe` command inside a frame to create the split slide
- Using curly braces, you can also set an optional second title
- An optional argument following the titles changes the split ratio
- The dark half of the slide is intended mainly for code examples together with the provided pygments style

Code Example

```
\begin{splitframe}[\langle options \rangle]{Title 1}{Title  
↪ 2}{\langle split ratio \rangle}  
...  
\end{splitframe}
```

Split Frame, split ratio=0.5

- The `{\split ratio}` option can be used to change the split ratio
- This is useful for code examples that require more width
- The default value is `0.6`

Code Example

```
\begin{splitframe}{Title 1}{Title 2}{0.5}  
...  
\end{splitframe}
```

Dark Frame

For larger code examples, the `darkframe` environment can be used:

```
\begin{darkframe}{Title}  
...  
\end{darkframe}
```
